

Anodized Aluminum Support Jacks

Economical support jacks combine solid construction with aluminum and stainless steel lift mechanisms with POM rollers for long life, with anodized aluminum decks for economy. The height adjustment handwheel is made of phenolic resin. Their rugged construction also provides exceptional stability, even in the larger sizes. They are popular for use in a wide variety of environments, including fume hoods, solution-baths, and marine and industrial laboratories.

- **Supports a Wide Variety of Items:** Aluminum and Stainless steel support jacks are available in a range of sizes and load capacities up to 150pounds for most lab applications.
- **Helps reduce contamination:** support jacks feature smooth surfaces that are easy to clean and sanitize.
